

DAY 1 — INTRODUCTION TO HTML & HTML5

Full Audio Lecture Breakdown • Strict Video Notes

Core Concept: HTML (HyperText Markup Language) coding ki duniya ka sabse aasan entry point hai. Ye ek markup language hai jo webpage ka skeleton, content structure aur formatting define karti hai taaki browser ko samajh aaye ki kya display karna hai.

END-TO-END EXECUTION FLOW

STEP 1

Plain Text

Continuous sentences aur bina structure wala normal raw data.

STEP 2

HTML Rules

Browser ko rules batana ki kaunsi heading, button, ya bullet point hai.

STEP 3

Browser Processing

Chrome, Safari, Edge code padhte hain (starts with `<!DOCTYPE html>`).

STEP 4

Formatted Page

Visual web page jisme sabhi elements apne rectangular boxes me show hote hain.

KEY CONCEPTS INVOLVED

- **Markup Language:** HTML koi complex programming language nahi hai; ye plain text ko structure aur format deti hai.
- **Formatted Text:** Text ko attractive aur readable banana (jaise **Bold**, *Italic*, Bullet Points aur chemistry formula me sub-script jaise H_2O).
- **Inspect Tool:** Right-click → Inspect karne par pata chalta hai ki saari website chhote-chhote **Rectangular Boxes (HTML Elements)** se milkar banti hai.
- **Page Source:** Right-click → Page Source se poori HTML file ka code dikhta hai jo `<!DOCTYPE html>` se start hota hai.

INTERVIEW QUESTIONS

1. HTML ka full form kya hai aur isko markup language kyu bolte hain?
2. HTML ko hardcore programming language kyu nahi mana jata?
3. Plain text aur Formatted text me kya farak hota hai?
4. Browser me 'Inspect' aur 'View Page Source' me kya difference hai?
5. Webpage par elements rectangular box ki tarah kyu dikhte hain?

✓ DO'S

- HTML ko website ka **structure aur content rules** banane ke liye use karein.
- Code ko real-time samajhne ke liye browser ke **Inspect** tool ka use karein.
- Samjhein ki plain text ko line-by-line format karne ke liye HTML tags zaroori hain.

✗ DON'TS

- HTML ko styling, colors ya fonts ke sath confuse **mat** karein (ye HTML ka kaam nahi hai).
- HTML ko shuruat me ek tough ya complex programming language **mat** samjhein.
- Ye assume **mat** karein ki raw text bina markup ke apne aap line break ya format ho jayega.

★ PRO / INTERVIEW TIP

Interview me hamesha clear karein ki **HTML styling ya design nahi karta**. HTML ka single role browser ko ye batana hai ki webpage par *kya dikhega* (heading, paragraph, image, button) aur content ka *structure kya hoga*.
